Subject: RE: Zebrafish data on ToxCast dashboard

Hi Shoba – I looked into this. A chemical had to have at least 4 concentrations worth of data for an endpoint to be used, and pentachlorophenol only had 3 for most of the endpoints, so not fitting or hitcalling was performed.

Richard

Subject: Zebrafish data on ToxCast dashboard

Hi Richard,

Hope this email finds you well.

My student intern, Cordelia (CC-ed here), has been exploring the Tanguay lab zebrafish data in depth with the raw files we received from Lisa Truong. In the course of this project, Cordelia found that for pentachlorophenol, the ToxCast dashboard only reflects the data for the MORT and ActivityScore endpoints. The information on the dashboard indicates that pentachlorophenol was not tested for any other 120 hpf endpoints, but it actually was. Over a phone call this morning, Lisa recommended that I share this finding with you once I mentioned wanting to let the appropriate US EPA folks know about the discrepancy we found. So just wanted to give you a heads up.

Thanks,
Shoba
